NOTICE TO RESIDENTS

On Thursday, September 15, 2005, a portion of a 24-inch waste water pipe main line ruptured at 3810 Shipyard Boulevard. The line pumps waste water to the Southside Waste Water Treatment Plant. This is no threat to drinking water and the waste water services have not been interrupted. However, as a precaution, the City recommends that you not come into contact with the water.

City crews are onsite stabilizing the affected area and making repairs. Crews will be working in the area to repair and clean up the spill. We anticipate that the clean up will be completed within the next few days.

If you would like more information, you may call (910) 341-1010 Ext. 2222 or e-mail shipyard@wilmingtonnc.gov
